

The analysis software for quick response to opportunities and challenges

## The solution

As a leader in business analytics, TARGIT focuses on intelligent design, even more powerful business analytics, integrated reports, new features and functionalities.

Use enhanced analytics tools to evaluate and interpret your business data and share your insights with colleagues and partners - get answers to your questions and put your insights directly into action.

## TARGIT Decision Suite - the complete BI solution

The TARGIT Decision Suite combines analytical evaluations, reporting and dashboards in one solution and is one of the 5 best products in the current BARC study (Business Application Research Center).

### Scope of functions

- Design your own analyses and find the information you need
- Automatically distribute reports, reports or analyses to defined recipients via mail
- Get an overview of KPIs thanks to intelligent real-time dashboards
- Define intelligent agents that report when user intervention is needed
- Share built-up knowledge with the company via storyboards (visualization of the most important dashboards)
- Embed analytics and reports directly into Microsoft Dynamics 365 CRM and SharePoint
- Data mashups: connect and analyze disparate data sources
- Access analytics and reports via mobile devices
- Drill down to the document level to track reports and metric

## Advantages

- ✓ Central data platform
- ✓ Meaningful and up-to-date company data
- ✓ Quick and complete overview of business processes
- ✓ Various analysis and reporting tools
- ✓ Automated processes (definition of individual rules possible)
- ✓ Dynamic date comparisons (previous day, month, year) with in DNA
- ✓ Automatic receipt of BI data via mail
- ✓ Easy integration into existing IT landscape
- ✓ User-friendly and intuitive operation based on Microsoft Office
- ✓ Mobile and scalable
- ✓ Simple and intuitive dashboard and reporting

## Functionality

The Business Intelligence solution TARGIT uses your existing solutions as a data source. This includes ERP solutions such as Microsoft Dynamics 365 Business Central / NAV, customer management solutions such as CRM Dynamics 365 or business solutions such as the TSO-DATA industry solution KatarGo. This data is transferred to the SQL server or to the data warehouse and is then available in the form of graphical evaluations via the Windows client, the web client or the mobile client.
