

# EDI interface for Microsoft Dynamics 365 Business Central

Electronic Data Interchange - The paperless transfer of business data

## The solution

Fast electronic dispatch of data, documents, invoices and delivery bills is a priority for almost all companies today. TSO-DATA has developed an interface so that EDI data can be read as well as exported or sent in the international EDIFACT standard format of Microsoft Dynamics 365 Business Central.

## Functionality

The EDI interface connects Microsoft Dynamics 365 Business Central to the EDI solution of Softzoll, which automatically converts the data from Business Central and then transfers the data. Incoming messages can be processed by Dynamics 365 Business Central and also sent from the enterprise solution. Standardized predefined message types are used in the data exchange, such as:

- INVOICE - Invoice data
- DESADV - Delivery confirmations
- QUOTES - Quotations
- ORDERS - Orders
- SLSRPT - Sales data transfer
- INVREPORT - Existing customers

The EDI/XML software from Softzoll can be used as an in-house or outsourced ASP solution in the data center.

## Advantages

- ✓ Export and import of data for EDI data exchange on the purchasing and sales side
- ✓ No intervention in the Microsoft Dynamics 365 Business Central standard
- ✓ EDIFACT processing runs automatically
- ✓ Quick and easy extension of the familiar working environment
- ✓ High degree of cost optimization
- ✓ Strong, competent implementation partners
