LS Connector

The interface between KatarGo and LS Central

In times of multi- and omnichannel, mail order companies have to consider more than just online sales channels. That's why many retailers also operate branch stores to offer customers services that a pure online store does not cover. For this reason, we have developed a standard interface that connects KatarGo, the Business Central industry solution for mail order and wholesalers, with the LS Central retail solution.
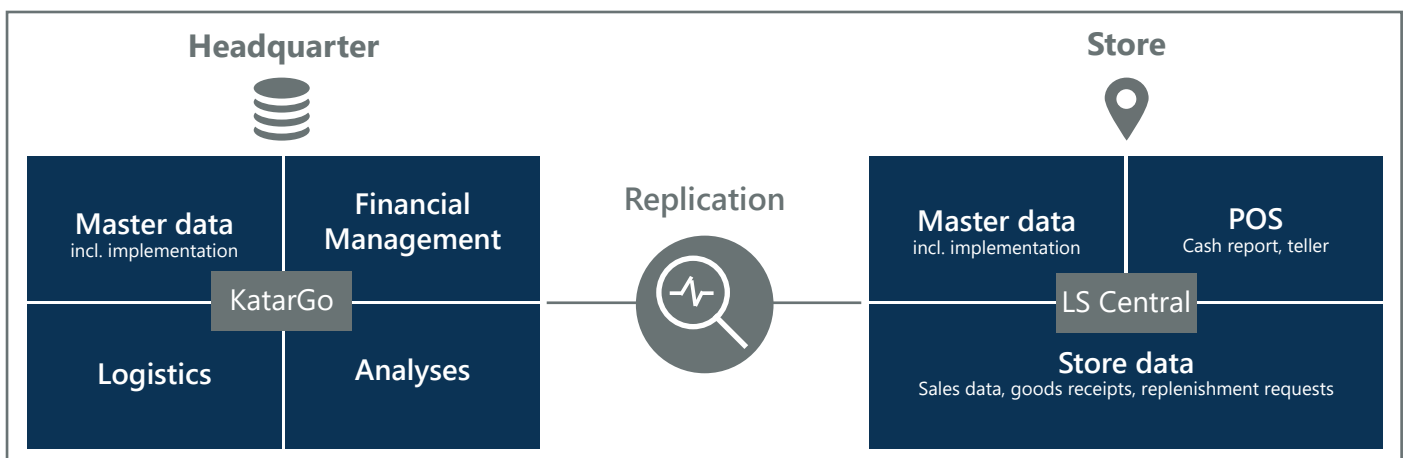

Advantages at a glance:

- KatarGo remains the „leading" system (business logic)
- One-time data maintenance at a central location
- Central evaluations, financials & control
- Interface works in the background
- Faster & more flexible connection (cross-version: e.g. LS 2017 with KatarGo 2009)
- Customizations remain
- Easier upgrade
- No duplicate licenses
- The specific advantages of both solutions are combined

Functionality:

Thanks to the LS Connector, both store employees and back-office staff work with a uniform data status. While the master data from KatarGo is made available to the store, store-specific data, such as sales data and goods receipt data, is transferred back to KatarGo.

- One central business logic
- Constant replication of master data
- Adhoc queries via WebService possible at any time
- Return of article items and posting-relevant data
