TSO-DATA LS Monitor

The tool for monitoring background processes in LS Central
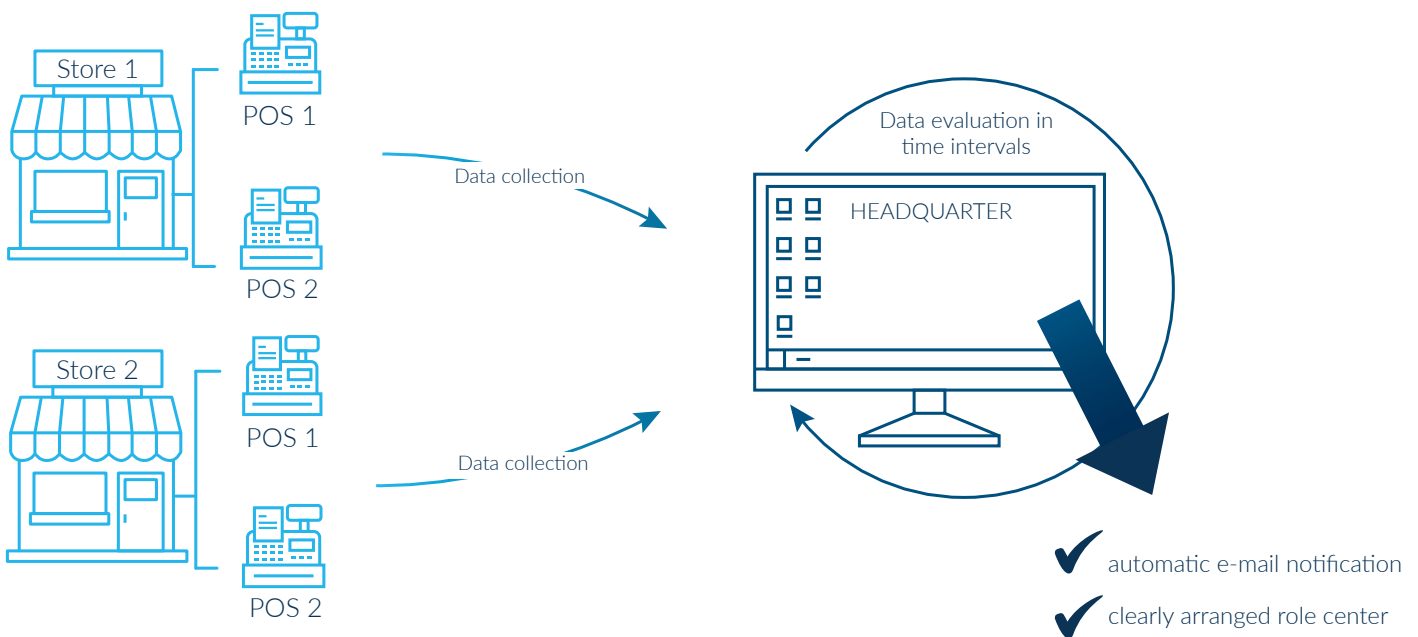

LS Monitor

Monitor the background processes of your LS Central system with the TSO-DATA LS Monitor Tool and be notified as soon as an operation has not been executed or an error has occurred. In the LS Monitor system module, all decentralized stores within the LS Central landscape are monitored. Technical data recorded in the stores is replicated to the head office using the LS Data Director so that it can be monitored in the specially designed role center.

Likewise, store key figures resulting from cash processes can be called up in a separate list in the Business Module (available from LS Central 16) and viewed in real time. In the event of an error, a direct connection to the store can be established from the list via Remote Connect or Teamviewer.

Your advantages at a glance

► One-click configuration

► Easily accessible error overview

► Additional database, backup, system monitoring

► Transparent and clear

► Automatic alerts by e-mail

► Individual settings

► Remote Connect function

► Forecasting of DB size

Functionality

Store 1 — POS 1, POS 2 — Data collection → HEADQUARTER — Data evaluation in time intervals — automatic e-mail notification — clearly arranged role center

Store 2 — POS 1, POS 2 — Data collection
