

GDPR ToolBox for Dynamics 365 Business Central/NAV

We support you in fulfilling your requirements

Overview

The new Addon solution supports you in complying with the GDPR requirements with regard to documenting and reporting your Business Central/NAV processes – such as, e.g., identification of personal data, classification of tables as well as generation and processing of deletion and anonymization proposals. React within the statutory deadlines upon requests of persons concerned, for example -document such requests and provide respective information or export the personal data from Business Central/NAV, if necessary. Review and document user registrations and access rights in Business Central/NAV and reduce your documentation efforts by means of integrated evaluations.

Key-Features

- Documentation of Business Central/NAV data structures for personal data
- Allocation of data origin, declarations of consent and of processing purposes
- Table-related requirements for the reason of data collection
- Documentation of requests by persons concerned, such as, e.g., duty of disclosure, requests for deletion, requests for restrictions or for the correction of data
- Implementation of the duty of disclosure by PDF, restriction of use, request for deletion and request for porting of one's own data (data export)
- Documentation of users with rights of access to the tables with personal data
- Automatic or manual postponing of deletion and anonymization deadlines subject to the deposit of reasons
- Deletion and anonymization proposals with regard to pending data

Added values for your company

Structured documentation of the relevant areas in Business Central/NAV

Individual reporting about personal data in your Business Central/NAV system by the recording of tables. In case of incoming requests, you can thus respond quickly and issue data at the touch of a button.

Keep an overview even in case of many data

Overview of personal data and deadlines.

Licensable Business Central/NAV Add-on for all versions from NAV 2009 R2 up

The Add-on is available for all versions from Microsoft Dynamics NAV 2009 R2 up and is already supported by a large number of Business Central/NAV partners.

Simple integration and training materials for „selfservice“

The integration of the GDPR ToolBox only requires a few adjustments on standard objects, so that Add-on can also be used in adjusted Business Central/NAV environments. Subsequent to integration, our brief instructions support you in implementing, setting up and handling our Add-on in order to enable you to organize your data protection processes independently.

Favourable implementation and quick project introduction periods

Simple and cost-effective introduction to the implementation of the GDPR guidelines for Business Central/NAV, even for small companies.

Continuous further development

Based on the legal circumstances, the GDPR ToolBox will continuously be further developed by our expert team in the course of a dynamic process.
